CHANGE PROPOSAL UPDATES TO PLANS

UPDATE TO PLANS – ENERGY CODE REFORM

1 OVERVIEW

Several Change Proposals and Issues require updates to their Change Plan to reflect the new governance arrangements being introduced through Energy Code Reform. Where appropriate, progression of these changes will be deferred until the new arrangements are in place to ensure alignment with the future governance model and avoid unnecessary rework. Deferring certain activities until the new arrangements are in place will support a smoother transition and avoid progressing work through governance routes that are due to change. It will also ensure that appropriate forums, including the Strategic Advisory Forum (SAF), have had the opportunity to contribute to solution development.

This approach ensures that the SAF can help shape proposed solutions throughout their development, rather than being asked to make recommendations for the first time at the Final Report stage. Similarly, it gives RECCo visibility of Modifications earlier in the process and will prevent Modifications reaching the final decision stage without their prior consideration.

The updates to plan are below:

R0178 - Improvements to CSS Business Process Logic

I0187 - Schedule 8 Review and Best Practice Guidance Development

I0200 - Review of the REC's Address Management Service

I0237 - Erroneous Switch Review: CSS Solution

I0312 - Review of export meter work arrangements

2 CODE MANAGER RECOMMENDATION

The Code Manager recommends that the Change Panel:

- **REVIEW** the updates to plans; and
- **APPROVE** the updates to plans.
