REC GAS DATA ACCESS MATRIX CHANGE

ADMINISTRATIVE CHANGES TO ALIGN TO DATA PERMISSIONS MATRIX (XRN5605)

BACKGROUND

XRN5605 – Amendments to the must read process was raised to deliver the requirements of IGTUNC Modification 159V – Amendments to the must read process. This will add the following data attributes to the Data Permissions Matrix (DPM) which should then be reflected within the REC Gas Data Access Matrix (DAM).

This is an administrative only change and no REC Parties will have access to this data, only the Performance Assurance Framework Administrator (PAFA). If REC Parties see these additions to the DAM as valuable and wish to make a use case for access, this would be dealt with as a separate change.

DATA ITEM CHANGES

Addition of the below data items to the Data Access matrix

Data Type	Data Item	Definition and reason for change
Must Read Exclusion	Must Read Exclusion Metering Issue Flag	This flag is populated because a Metering Issue prevents a Valid Meter Reading to be obtained therefore the Supply Meter Point should be temporarily excluded from the Must Read process. This flag may only be populated for Supply Meter Points on IGT Networks.
Must Read Exclusion	Must Read Exclusion Metering Issue Flag Effective From Date	The date that the Must Read Exclusion Metering Issue Flag was recorded in UK Link systems.
Must Read Exclusion	Must Read Exclusion Metering Issue Flag Effective To Date	The date that the Must Read Exclusion Metering Issue Flag was reversed in UK Link systems to indicate that the Metering Issue has now been resolved.
Must Read Exclusion	Must Read Exclusion Metering Issue Flag Instructing Party Identity	The Market Participant identity who notified the change to the Must Read Exclusion Metering Issue Flag.

SERVICE PROVIDER COMMENTS

This change was raised by the GES Provider who has confirmed that these are administrative changes only and will have no associated technical impacts.

CODE MANAGER RECOMMENDATION

The Code Manager requests that the Performance Assurance Board:

APPROVE the proposed alterations to the Gas Data Access Matrix;

APPROVE the implementation date of these changes for 23 February 2024.

NEXT STEPS

The Code Manager will trigger a 10-working day consultation period on 02 February 2024 to 16 February 2024. If the Consultation responses return no concerns that would require the Code Manager to revisit the request, the Code Manager will implement changes to the DAM on 23 February 2024.
