CHANGE OVERVIEW

This Change Proposal seeks to amend the Electricity Retail Data Service (ERDS) Service Definition to add in the Greenwich Mean Time (GMT) time zone to any time-based statements.

	High Impact: N/A
	Medium Impact: N/A
	Low Impact: ERDS Providers EES Provider CSS Provider Suppliers

CODE MANAGER'S RECOMMENDATION

The Code Manager recommends Change Proposal R0060 is **APPROVED** for implementation on 27 June 2025.

BACKGROUND

1 BACKGROUND

The Electricity Retail Data Service (ERDS) Service Definition does not currently specify any time zones.

An example of the current legal text is:

> Data received by the Electricity Retail Data Agent (ERDA) shall be included within the ERDS Total Daily Processing on the basis that all data received prior to 23:00hrs is made available to the Supplier Meter Registration Agent (SMRA), Electricity Enquiry Service (EES) Provider or Central Switching Service (CSS) Provider (as applicable) by 06:00hrs the following Working Day.
>
> Data received after 23:00hrs will be made available to the SMRA, EES Provider or CSS Provider (as applicable) by the second Working Day.

CSS and UKLINK work in Local time and EES, Smart Metering Data Service Provider (SMDSP) and Metering Point Registration System (MPRS) work in Greenwich Mean Time (GMT), this is also known as UTC0.

All Data Transfer Service Market Messages (flows) must be in GMT, this is a S3P4V1-7_User_File_Design_S Requirement. Data Aggregators also require Market Message MM00109 (D0209) 'Instruction(s) to […] Data Aggregator' to be in GMT.

MPRS is the system through which ERDAs provide their service. If MPRS end of day closes an hour earlier than expected, due to the use of local time, it can lead to a delay in flow processing and systems becoming misaligned.

2 PROBLEM STATEMENT

The ERDS Service Definition does not specify the time with a specified time zone. This has led to some instances of MPRS close of day running at 22:00GMT instead of 23:00GMT. A confirmation of time zone is required within the ERDS Service Definition to negate any confusion or delays in flow processing and systems becoming misaligned.

3 USER STORIES

REF.	USER STORIES
MARKET PARTICIPANT USER STORIES	
M1	As a Supplier, I want to have confidence that the data in the systems is aligned and accurate.
M2	As ERDS Provider, I want to be able to provide accurate and appropriately labelled data that can be aligned with data from other systems.

M3	As a Supplier, I want to have a clear understanding of the ERDS processing timescales so I understand the cut off for sending messages to SMRS / ERDS and for receiving outbound messages.

PROPOSAL

4 PROPOSED SOLUTION

The REC currently states, under Schedule 1 – Interpretations and Definitions, General Interpretation paragraph 1.1(j), that 'a time is a reference to that time in the UK'.

The proposed solution is to progress a legal text clarification by adding in 'GMT' to the time-based statements relating to data processing within the ERDS Service Definition. The change does not seek to amend the technical systems themselves. ERDS Providers have confirmed, through a request for information by the REC Code Manager, that the proposed clarification meets with their understanding of how the systems are working.

The R0060 Consolidated RFI Responses v1.0 (05.03.2024), can be found on here.

4.1 MARKET-WIDE HALF HOURLY SETTLEMENT

DESIGN	DATA SPECIFICATION	DRAFTING
The MHHS Design explicitly states that operating hours are defined in clock time. Therefore, a change would be required if it is determined that operating hours should be defined in GMT	No impact	The amendments in R0060 are expected to be a change to the baseline only and do not directly impact the code drafting developed within the MHHS Programme. The proposed implementation will be post implementation and therefore will not impact implementation of the MHHS code drafting.

4.2 BALANCING AND SETTLEMENT CODE

It should be noted that the correction being delivered through R0060 could create a misalignment between the REC ERDS provisions and the BSC Supplier Meter Registration Service (SMRS) provisions. This risk has been raised to Elexon.

5 DRAFT LEGAL TEXT

The legal text changes to deliver the proposed solution to R0060 can be found here.

The legal text changes have been redlined against the current ERDS Service Definition; however, a view has also been provided against the MHHS code drafting version, which will be implemented before R0060.

The legal text also includes the inclusion of a new definition in Schedule 1 – Interpretations and Definitions, for GMT, to support the change.

6 DELIVERY AGAINST CHANGE PROPOSAL PLAN

To date all activity has been completed within the planned timescales, set out in the Change Proposal Plan which can be found here.

7 KEY RISKS, ASSUMPTIONS, ISSUES AND DEPENDENCIES

7.1 RISKS AND ISSUES

No.	RISK	NOTES	HOW/WHEN TO VALIDATE
R0060.PCR.R001	R0060 highlights possible risks from not operating in clock time		To be reviewed following consultation

No issues have been identified.

7.2 ASSUMPTIONS AND DEPENDENCIES

No.	ASSUMPTION	NOTES	HOW/WHEN TO VALIDATE
R0060.CPP.A001	The changes that will be proposed under R0060 will not impact existing system processing.		Validated through request for information.
R0060.CPP.A002	There is no dependency on the progression of an MHHS Programme CR.	R0060 should progress whether an MHHS change is required or not.	Validated during initial assessment.
R0060.PCR.A003	Any changes to Performance SLAs reported by ERDS as a result of R0060 should only be applied from the implementation date.		Validated during initial assessment.

No dependencies have been identified.

8 PROPOSED IMPLEMENTATION DATE AND APPROACH

PROPOSED IMPLEMENTATION DATE	27 June 2025

PROPOSED IMPLEMENTATION APPROACH	BIG BANG

This change is a clarification of existing system operations and therefore does not in itself require any lead time. However, the implementation of the MHHS code drafting, at MHHS Programme milestone M8 'Code changes delivered', is planned for March 2025 and includes updates to the ERDS Service Definition.

Although the proposed additions are expected to be a change to the baseline only and do not directly impact the code drafting that has been developed within the MHHS Programme, they will need to be applied to the version of the ERDS Service Definition updated for MHHS.

The proposed implementation date is therefore on the next available release after milestone M8. This will avoid complexity at the point of implementation for the MHHS code changes and avoid a need for a phased implementation for the R0060 legal text.

The approval of R0060 will provide clarity until its implementation.

9 BUSINESS CASE ASSESSMENT

9.1 COSTS

There are no costs associated with the implementation of R0060 as it is a clarification only.

9.2 BENEFITS

The Code Manager has not identified any benefits through R0060 that are quantifiable, but the change would bring about the following intangible benefits:

INTANGIBLE BENEFITS	BENEFITS DESCRIPTION
ACCURACY OF THE REC	R0060 will ensure the REC accurately reflects the ERDS operating hours throughout the year.
REDUCED RETAIL RISK	Clarity in the REC on the operating hours for ERDS will reduce the risk of impacts to flow processing from delays and systems being misaligned, and any associated consequences to Consumer-impacting processes.

9.3 COST BENEFIT ANALYSIS SUMMARY

There are no costs associated with implementation of this Change Proposal therefore the benefits from implementation of this change are not impacted.

10 CASE FOR CHANGE

The Code Manager considers that there is a case for change to implement this Change Proposal, on the basis that:

- the proposed solution is fully formed and appropriately resolves the problem statement;
- there are no costs associated with implementation of this change or ongoing operations;
- without implementation of this change, the delivery of the existing ERDS operations will not be accurately reflected in the REC;
- implementation of this change reduces risk to Consumer experience; and,
- a positive business case can be made, as set out in section 9 of this report.

11 CODE MANAGER'S RECOMMENDATION

Based on the assessment in section 9 and 10 of this report, the Code Manager considers a positive business case can be made for implementing this solution. The Code Manager recommends that the Technical Expert Panel:

- **APPROVE** the proposed change solution;
- **APPROVE** the proposed implementation approach; and
- **APPROVE** the proposed implementation date of 27 June 2025.

12 CONSULTATION PLAN AND NEXT STEPS

The consultation on this Preliminary Change Report for R0060 will be published on the REC Portal on 28 June 2024 and closes on 19 July 2024**.**

Following consultation, the Code Manager will produce an updated version of this change report. This will include the outcome of the consultation, setting out a summary of the consultation submissions and the Code Manager's response. The report will be issued to the Technical Expert Panel to make its determination.

RETAIL ENERGY CODE

14 GLOSSARY

TERM	DEFINITION
Central Switching Service (CSS)	means the Systems and processes provided or procured by the CSS Provider for the purpose of providing the Address Management Service and the Registration Service.
CSS Provider	means the DCC when performing functions under or in relation to this Code (but always excluding its functions under the Smart Energy Code and its roles as CSS Systems Integrator, SI Provider and Switching Operator), including in respect of the Central Switching Service and including in effecting the design, build and testing of any System that will allow it to perform functions under this Code after the CSS Go-Live Date. This role is the CSS Procurer and Manager function as described in the E2E Data Migration Plan, E2E Integration Plan, E2E Post Implementation Plan, E2E Testing Plan, E2E Transition Plan: Implementation Approach and E2E Transition Plan: In-Flight Switches Approach.
Data Aggregator (DA)	means the person Appointed by an Electricity Supplier to aggregate consumption data for an RMP as further described in the Balancing and Settlement Code.
Data Transfer Network (DTN)	has the meaning given to that expression in the Data Transfer Services Agreement.
Electricity Enquiry Service (EES)	means the service described as such in the EES Service Definition.
Electricity Retail Data Agent (ERDA)	means a provider of a DNO's Electricity Retail Data Service.
Electricity Retail Data Service (ERDS)	means the electricity registration services provided under this Code to support the provision of electricity retail data to the CSS and other services.
Energy Supplier	means a person which is either or both an Electricity Supplier and/or a Gas Supplier.
Market Message	means a structured communication sent between two Market Participants in the form and with the content required (and as otherwise specified) by the Data Specification.
Metering Point Registration System (MPRS)	means the System used or procured by each DNO in order to provide the Electricity Retail Data Service in accordance with the REC and / or the Supplier Meter Registration Service in accordance with the BSC.
Supplier Meter Registration Agent (SMRA)	means the provider of the Supplier Meter Registration Service (SMRS) provided pursuant to the BSC.
